

ELIMINATES START-UP WEAR

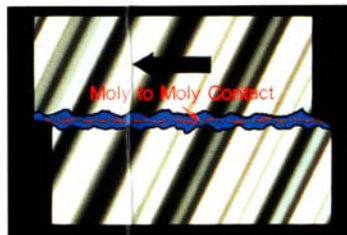

When is the toughest time on your engine?

At start-up, because your oil's in the pan, not in the engine. So, when you start your engine, metal grinds against metal. And in those first 60 seconds, engineers estimate that 80% of your engine wear takes place.

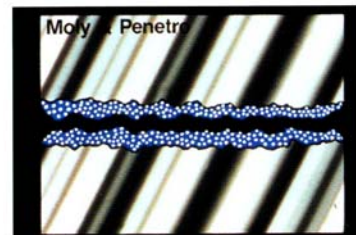

SUPREME 7000 does what no other oil can. It protects your engine even when the oil isn't there. **SUPREME 7000** incorporates two proven friction fighters, Micron Moly® and Penetro®, that plate themselves to the internal parts of your engine and protect it against start-up wear.

Metal to metal causes the most engine wear.

Moly actually bonds to metal surfaces.

Moly combines with Penetro to provide maximum start-up protection.
