

FASTER STARTS

In cold weather, conventional oil turns to molasses. Engines won't start, batteries drain down, engine parts grind together. But not with **SUPREME 7000**! Thanks to its unique synthetic blend, it flows when other oils won't. That means you'll enjoy faster starts even at -25°F. And because it's a synthetic blend, **SUPREME 7000** gets to critical engine parts fast – up to 10 times faster than conventional oils.
